CAD is used to design three-dimensional (3D) models of any physical object such as buildings, bridges, ships, locomotives, trains, parts, machines, cars, trucks, and components of any of these objects, as well as more abstract models. It is also used to prepare drawings for engineering, architecture, industrial, and construction. CAD is the most widely used type of graphic design tool today, and is estimated to be used by around 4% of the U.S. workforce. It supports 2D drafting, 3D modeling, 2D and 3D drawing, 2D and 3D engineering, and information management and design management.[2] In 2015, Autodesk's global workforce reached 85,000 people.[3] AutoCAD is produced in both MS-DOS and Windows (x86 and x64) versions. AutoCAD LT (formerly AutoCAD 2000), a more portable version, is also available in free and professional versions. AutoCAD LT can only create 2D drawings, whereas AutoCAD can produce 2D and 3D drawings. AutoCAD does not support vector graphics. To design a model, the user must first create a drawing that is stored as a text file. By default, the first person who opens the file is the owner of the model. Owners can designate other users as collaborators. Collaborators can make changes to the design, and if they have the privileges to do so they can save their changes to the file. Owners can have multiple collaborators, and may designate a group as an organization. Collaborators in the same group have full control over the model, but only a subset of collaborators can edit the model, and only the owner can modify the file to keep a "history" of changes. The text file of a design is called a project file. This file is held on a server at the user's office. The AutoCAD program can be run from a portable or fixed computer, from a server, or remotely using a web browser. The AutoCAD LT portable program requires a computer that can run a version of Windows 7 or 8, Windows 10 or a newer Windows, or Mac OS X. AutoCAD can be run on a server running Windows or on a Linux or Unix server. AutoCAD is also available on the cloud as a web app. AutoCAD or AutoCAD LT can be installed on a desktop computer, a portable computer, or a server computer.

He is not a good leader, he is not a good person,” a man said in the video, which is posted on a website associated with the extreme right English Defence League. “His language is weird and dirty.” The 30-second clip was removed from the website, along with three other videos from the

same host, after inquiries from The Daily Telegraph. The Weasel Club, which is linked to extreme right-wing activists, posted the clip on Wednesday to their YouTube channel. It is one of dozens of videos from far-right and extremist groups circulating online since Pope Francis, the first Latin American pontiff, was elected in March. Britain First, a far right group whose followers include Britain's deputy prime minister, has carried out a series of attacks on mosques. Last month, an anti-Islamic group wrote to the Roman Catholic Church to raise concerns that Pope Francis was preaching "the Islamic religion in your sermons". In another video, broadcast on YouTube, someone suggested that the 73-year-old pope is "crazy with Islam and a secret Muslim". The comments were made by a man on a video claiming to show Islamised Sweden. The English Defence League is a group formed in 1999 by former English football fans that wants to rid Britain of Muslims and is associated with many racist and anti-Islamic remarks.

Q: Calculation of historical values in Apache Pig I'm using Apache Pig for the first time and I've been following some online tutorials in order to try and learn how it works. Now, I'm trying to perform calculations on historical values and I'm aware that Pig calculates from the current row. But how can I make Pig calculate on the previous row? a1d647c40b

Kremlin Advisor: Iran's Nuclear Negotiations Should Be Implemented Alexander Gabuev, a Russian political scientist, argues that the Russian position is that a nuclear deal between Iran and the P5+1 should be implemented. Last week, the P5+1 negotiators gave the green light to Iran's Foreign Minister Mohammad Javad Zarif to travel to Moscow for talks with his Russian counterpart, Sergey Lavrov. Despite this, Russian President Vladimir Putin said his government was still waiting for a formal invitation from the P5+1 to negotiate with Zarif. Iranian officials have welcomed the P5+1 stance, arguing that a Russian veto on a new agreement would be a blow to the chances of a deal. Putin's spokeswoman, Maria Zakharova, on Wednesday claimed that the Russian leader had proposed to Zarif that the two parties "sit down and discuss our common goals". "The situation regarding the Iranian nuclear program is a very delicate one and at the same time important, and the least Iran gets from this process is a final agreement that would lay the foundations for further development of relations between Russia and Iran," she said. Last week, Putin said that he believed Zarif and Lavrov could help bring about a settlement to the issue. "I think that if we could cooperate, this would be a positive force," Putin said. Toward a Deal? Analysts say that Russia has a lot at stake in the negotiations. "Russia has a crucial geopolitical role to play, which is not an exaggeration," said Alexander Gabuev, a Russian political scientist
